

## Computer team 12-17-15

Attendees: Melissa Pappas, Connie Lydon, Willie Newell, Julia Hupperts, Clarence Severson, Gerard Forys, Aaron Smothers

### Windows 10 upgrade issues:

There was a password issue at Edgerton. Central's computers seem slow since Windows 10 was installed. (Slow at start up at least.)

You should thaw DeepFreeze, give it a few minutes, and then refreeze and the computers should be much faster. This only needs to be done once, not every time you boot the computers.

Some sites have computers with screens that flicker during boot up. If it gets worse or happens when the computers are being used that is an issue. The graphics drivers might need updating. If it is just at boot up it is nothing to worry about.

### Computer policy and Open DNS:

The policy will be updated to be similar to PHA's policy. This includes the hi-rise computers and people's own devices. This is allowed because the Internet is paid for with federal funds.

It is not allowed to pay for Internet with hi-rise funds.

This policy is still under development. There will be meetings with the computer team and Presidents Council.

PHA has the right to limit sites people can view. Things like torrents and porn definitely need to be blocked.

The current computer rules are a few years old and need to be updated.

Any disrespectful treatment or abuse from residents because of this policy should be reported to Julia. No one should have to take poor treatment because of this.

Having a registration system for the computers was suggested. This would make it easier to track use and abuse of the system.

### Computer inventory:

The computer inventory list and password list needs to be updated. It is up on Google docs and is easy to change and update.
