

Computer Team 1/21/16

Attendees: Melissa Pappas, Yasmine Aminou, Connie Lydon, Julia Hupperts, Clarence Severson, Gerard Forys, Michael Tate, Ruby Steward, Aaron Smothers

The latest roster was passed around so information could be corrected if needed.

Whether or not email reminders were needed was discussed. It was decided that they would be helpful. Julia will handle sending out a reminder several days before the meeting date. The meeting date is also on the front page of the Presidents Council website.

Aaron is in the process of doing an inventory of the computer labs. Iowa, Montreal, and Valley will be getting one new computer each. Aaron will be moving to an office at Dunedin family site at the end of this month.

There is an issue at Wilson with residents getting the admin password. Only the computer admin, Aaron, and Melissa should have access to the admin password. There really isn't a reason for residents to have admin access. (Nothing they would be doubt should require that.)

There is also an issue at Wilson with someone messing with the wi-fi settings on the computers. Residents should not be doing that. The wi-fi icon can be hidden to make getting to the settings more difficult.

A computer at Cleveland reverted to Windows 7. It's possible there was a faulty update that triggered that. It's also possible someone had the admin password and did it intentionally.

Central is having some wi-fi strength issues.

Seal has someone changing the desktop background on the computers and changing the monitor brightness. That person should be talked to and told they are not to do that. The manager could be told if necessary.

Exchange has people messing with the computer wiring. Some components may need to be locked up there.
